

Your guide to

Murdostoun Brain Injury Rehabilitation and Neurological Care Centre

At Murdostoun Brain Injury Rehabilitation and Neurological Care Centre, we rehabilitate, treat, care and support people over 16 with brain injuries and neurological conditions.

We provide specialist rehabilitation for people in the early stages of recovery from an acquired or traumatic brain injury right through to independent living or residential care for those with other neurological conditions such as Parkinson's Disease, Huntington's Disease or Motor Neurone Disease.

We are also equipped to manage the following:

- **Spasticity**
- **Dysphagia, PEG and PEJ care**
- **Tracheostomy care**
- **Skin integrity problems**

We provide cognitive rehabilitation, functional retraining and Sensory Modality Assessment and Rehabilitation Technique (SMART) assessment if required.

Located in the heart of the Scottish countryside, we have two separate buildings on our campus: a brain injury rehabilitation centre and a neurological care centre.

Every patient or client with a brain injury or complex neurological condition can, with the right person-centred interventions delivered by the right team at the right time on their treatment journey, have an improved quality of life irrespective of their neurological difficulty.

Brain Injury Rehabilitation Centre

We provide individualised assessment and intense treatment to help patients recover from a brain injury. At all times we work to achieve the best possible outcomes in terms of independence and quality of life.

We most commonly assess and admit patients who are in the very early stages of recovery from their brain injury.

These patients are usually admitted from an NHS hospital once they are medically stable. We also assess and treat people who have been living with a brain injury for some time, but due to a change in their situation would now benefit from treatment.

Neurological Care Centre

We provide long-term care and respite care for individuals with a neurological condition. We offer two services.

Our **slow stream service** is designed for patients who need more time to practise new skills before moving back home or into the community. They may or may not have undertaken some specialist rehabilitation first.

Our **complex disability service** is for individuals with severe and far-reaching problems associated with their condition, who can no longer be looked after easily at home.

Overview

46 beds split across 2 units

- Regulated by Health Improvement Scotland and Care Inspectorate Scotland
- Dynamic consultant-led multidisciplinary team
- Range of high quality therapies available
- Assessments undertaken within 72 hours
- Person-centred care planning
